The compositions and methods of the present invention are useful for diagnosing, screening and treating disorders associated with abnormal CRF2-12 activity such as uncimmune diseases like rheumatoid arthritis, multiple sclerosis and inflammation. This sequence represents a cytokine receptor family 2 (CRF2-12) protein relating to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate cativity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing immunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, haematopoletic disorders, wound healing disorders, cholesteryl ester storage disease, infections, altoimmune disorders, multiple sclernolysis bullosa, Parkinson's disease, Hollesteryl ester storage disease, infections, Alzheimer's disease, athma, arthritis, bullosa, pacterial infections, Alzheimer's disease, asthma, arthritis, allery and pacterial infections, Alzheimer's disease, transplant rejection, graft verse host disease, ischaemia, stroke, acute respiratory disease septicaemia, psoriasis, inflammatory bowel disease, transplant rejection, depression, anxiety disease including parasupranuclear palsy, myotonic dystrophy, depression, anxiety disease including parasupranuclear palsy, myotonic dystrophy, depression, anxiety disease and myocardial infarction, disease including consential salure and myocardial infarction, and alloss and myocardial infarction, disease including consential and myocardial infarction, disease including consential and myocardial infarction, disease including consential and myocardial infarction, disease including consential and myocardial infarction, disease including consential and myocardial infarction, disease including consential and myocardial and m
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      respiratory diseases including chronic obstructive pulmonary disease, acute bronchitis and adult respiratory distress syndrome, liver disorders including hypercholesterolaemia, hypertrisglyceridaemia, cirrhosis, viral and non-viral hepatitis, type II diabetes mellitus, renal disease including acute and chronic renal failure, glomerulonephritis, Fanconi's syndrome, cystinuria, skeletal muscle disorders including hyposlycaemia and tendinitis, gastroincestinal diseases including intestinal obstruction and tropical sprue, spleen disorders including hypersplenism, Hodgkin's disease and malignant lymphoma, testicular cancer, male reproductive diseases including low testosterone and male infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

The sequences can be used in the diagnosis, prevention and treatment of immune diseases, including psoriasis, cancer, chronic/life-threatening infections, rheumatoid arthritis, multiple sclerosis, Crohn's disease, ulcerative colitis and transplant rejection and in reproductive medicine, e.g. for diagnosing abnormal immune reactions which cause abortions. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MMPKHCFLGFLISFFLTGVAGTQSTHESLKPQRVQFQSRNFHNILQMQPGRALTGNSSVY

The present invention relates to the isolation of 9 novel human PRO polypeptides and the CDNA sequences (AAS15360-AAS15368) encoding them. The novel PRO polypeptides include PRO1356, PRO1368, PRO13684, PRO3444, PRO3151, PRO94322, PRO9964, PRO1008 and PRO19598. The CDNA sequences encoding these PRO polypeptides have been designated as clones. DNA64803-1553, DNA84118-2520, DNA87997, DNA89273, DNA864866-1601, DNA64903-1553, DNA84118-2520, DNA87997, DNA89273, DNA95223-2567, DNA969973, DNA8101921 and DNA145887 respectively.

COMPOSITIONS (e.g. vaccines) containing PRO polypeptides and methods of inflammatory disorders. Such disorders include immune-mediated inflammatory disorders (e.g. osteoarthritis), non-immune-mediated inflammatory disorders (e.g. osteoarthritis), non-immune-mediated inflammatory disorders (e.g. diabetes mellitus), infectious disorders (e.g. diabetes mellitus), infectious disorders (e.g. diabetes mellitus), infectious disorders (e.g. diabetes mellitus), infectious disorders (e.g. diabetes mellitus), infectious disorders (e.g. diabetes diseases (e.g. cirrhosis), demyelinating diseases of the peripheral or central nervous system (e.g. Guillain-Barre syndrome), immune-mediated associated diseases. The polymucleotide sequences of the invention may be used in gene therapy. AAU09186 represent the novel human PRO polypeptides of the invention.
                                                                                                                                           Nucleic acids encoding PRO polypeptides, useful for detecting and treating immune related diseases and disorders in mammals including autoimmune diseases, inflammatory diseases and asthma -

263 AA;

Sequence

the invention.

The present invention relates to a new polymucleotide that encodes a soluble protein which binds to interleukin (IL)-TIF/IL-22 (also referred to as IL-22BP), where the complementary sequence of the invention by the foreign to a nucleotide sequence of 2271 or 2366 base pairs, as given in the specification. The molecules of the invention are useful for inhibiting (antagonising) effect of IL-TIF/IL-22 on a cell, for determining whether IL-TIF/IL-22 is present in a sample, for inhibiting binding of IL-TIF/IL-22 to a binding partner, preferably in vitro, and for obtaining an antibody molecule specific for the soluble binding protein of the invention, from a population or panel of antibody molecules of diverse binding specificity. The soluble protein is further useful in manufacture of a medicament for treating an IL-22 mediated fasease and for assaying an asent, preferably an antibody or a peptide fragment of IL-TIF/IL-22 or the soluble protein, that modulates binding of the soluble protein to IL-TIF/IL-22, where the agent identified is used in the manufacture of medicament for treating IL-TIF/IL-22 mediated discorder. The antibody is useful for determining presence of the soluble protein, where the antibody is detectably labelled. The present amino condition is an antibody as detectably labelled. The present amino condition is acid sequence represents the human IL-TIF/IL-22 binding protein #2 of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The patent discloses novel human cytokine, ZCYTO18 protein and its corresponding DNA. ZCYTO18 protein induces proliferation of cells expressing zcytoril, a receptor for ZCYTO18 or induces cytotoxicity in K5626 cells. ZCYTO18 DNA is useful for detecting a genetic abnormality in a patient. ZCYTO18 DNA and its antibodies are useful for detecting cancer and inflammation. ZCYTO18 protein is useful for killing cancer cells. It is useful for increasing platelets in a patient or injured tissue. It is also used in gene therapy. The present sequence is human zcytor16, which is a naturally expressed soluble receptor antagonist of ZCYTO18 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FVQYKIMFSCSMKSSHQKPSGCWQHISCNFPGCRTLAKYGQRQWKNKEDCWGTQELSCDL

The present sequence is human DNAX cytokine receptor subunit 4.2

(DCRS4.2). DCRS4 gene is located on chromosome 6q24 1-25.2.

(Cytokine receptors, fragments and antibodies are useful for treating immunological disorders. DCRS3 (50R), DCRS4 (cytor) or fragments are useful in drug screening to identify compounds having binding affinity to the receptor subunit. Modulators of DCRS are useful for modulating the physiology or development of a cell or tissue culture cells. A purified DCRS is useful as reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to production of antibody to the endogenous receptor. Cytokine receptor sequences are useful as probes for detecting levels of the cytokine receptor in patients suspected of having an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for isolating DCRS proteins and peptides, to screen expression libraries for particular expression products, to raise anti-idiotypic antibodies and for detecting or diagnosing various immunological conditions related to expression of the protein or cells which express the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MPRACELGFLISFELTGVAGTQSTHESLKPQRVQFQSRNFHNILQWQPGRALTGNSSVX 60

Cytokine receptor; Zcytorl6; IL-TIF; autoimmune disease; dermatological; inflammatory disease; inflammatory bowel disease; rheumatoid arthritis; asthma; systemic lupus erythematosus; myasthenia gravis; pancreatitis; diabetes; atherosclerosis; glomerulonephritis; gene therapy; cytostatic; immunosuppressive; nephrotropic; allergy; placental health; abortion; cancer; human; chromosome 6.
can also be used to detect IL-TIF levels which is indicative of pathological conditions including inflammatory states (e.g. rheumatoid arthritis) and cancer. Antibodies that bind zcytoris polypeptides and topolypeptides themselves are useful for the treatment of inflammation, inflammatory diseases (e.g. infection, asthma, inflammatory bowel disease, rheumatoid arthritis and atherosclerosis) and autoimmune diseases. The antibodies and acytoris polymucleotides are also useful for detecting cancer. The present sequence represents the human

The zcytor16 polypeptide can be expressed by standard recombinant methodology and can bind to 1L-TIF (undefined). The zcytor16 protein is useful for: inhibiting 1L-TIF induced proliferation or differentiation of hematopoietic cell(s) (progenitors); reducing 1L-TIF induced or IL-9 induced inflammation, and suppressing an inflammatiory response in a mammal with inflammation. Heteromeric/multimeric receptor polypeptides such as soluble zcytor 16/GRF2-4 can be used to reduce progression and symptoms of cancer. Zcytor16 polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઢ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                                 The invention relates to cytokine receptor designated as mouse Zcytor16 which can bind and antagonise the IL-TIF. The Zcytor16 polypeptide is useful in medulating the immune system by binding Zcytor16 figand, and thus, preventing the binding of the ligand with endogenous Zcytor16 receptor. It is useful for studying human inflammation or immune function, or for treating autoimmune or inflammatory diseases such as function, or for treating autoimmune or inflammatory diseases such as inflammatory bowel disease, rheumatoid arthritis, asthma, systemic upus erythematosus, wyasthenia quaravis or allergy, atherosclerosis, cancer, diabetes, glomerulonephritis or pancreatitis, or in assessing therapeutic aspects of IL-TIF, chemical therapeutics, anti-IL-TIF antibodies or Zcytor16 soluble receptors. Zcytor16 DNA and the anti-mouse Zcytor16 antibody are useful as probes in detecting gene expression and gene structure, such as in the indeceding and/or prevention of spontaneous abortions or in monitoring placental health and function. It is also used in gene therapy. The present sequence is human Zcytor16 protein. Human Zcytor16 gene resides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

The invention relates to an isolated type 2 cytokine receptor family (CRED-12) nucleic acid molecule encoding a polypeptide with amino acids 21-66 of a 231 residue amino acid sequence, given in the specification, or its complement. The compositions and methods of the present invention are useful for diagnosing, screening and treating disorders associated with abnormal CRED-12 activity such as autoimmune diseases like rheumatoid archritis, multiple sclerosis and inflammation. This sequence represents a cytokine receptor family 2 (CRF2-12) protein relating to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PNLPYRYQKEKNVSIEDYYELLYRVFIINNSLEKEQKVYEGAHRAVEIEALTPHSSYCVV 240

                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of 3 variants of a human cytokine receptor. The sequences can be used in the diagnosis, prevention and treatment of immune diseases, including psoriasis, cancer, chronic/life-threatening infections, rheumatoid arthritis, multiple solerosis, Crohn's disease, ulcerative colitis and transplant rejection and in reproductive medicine, e.g. for diagnosing abnormal immune reactions which cause abortions. The present sequence is

The present invention relates to a new polynucleotide that encodes a soluble protein which binds to interleukin (IL)-TIF/IL-22 (also referred to as IL-22BP), where the complementary sequence of the invention by bridises under stringent conditions to a nucleotide sequence of 2271 or 2366 base pairs, as given in the specification. The molecules of the invention are useful for inhibiting (antagonaing) effect of IL-TIF/IL-22 on a cell, for determining whether IL-TIF/IL-22 is present in a sample, for inhibiting binding of IL-TIF/IL-22 to a binding partner, preferably in vitro, and for obtaining an antibody molecule specific for the soluble binding specificity. The soluble protein is further useful in manufacture of a medicament for treating an IL-22 mediated is useful in manufacture of a medicament for treating an IL-22 mediated fragment of IL-TIF/IL-22 or the soluble protein, that modulates binding of the soluble protein to IL-TIF/IL-22, where the agent identified is used in the manufacture of medicament for treating IL-TIF/IL-22 mediated disorder. The antibody is useful for determining presence of the soluble protein, where the antibody is deectably labelled. The present amino and secular antibody is detectably labelled. The present amino and secular antibody is detectably labelled. The protein #1 of actid sequence represents the human IL-TIF/IL-22 binding protein #1 of

Polynucleotide and polypeptide of soluble protein which binds to interleukin-TIF/IL-22 useful for inhibiting effect of IL-TIF/IL-22 on a

Human, soluble protein; interleukin-TIF/IL-22; IL-TIF/IL-22; IL-22BP; IL-TIF/IL-22 antagonist.

Human IL-TIF/IL-22 binding protein #1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     autoimmune disorder; haematopoletic disorder; inflammation; arthritis; Parkinson's disease; Huntington's chorea; schizophrenia; antlarrhythmic; multiple scleroslis; Alzheimer's disease; analgesic; cardiant; asthma; ischemmia; stroke; AlDS; bone disease; atheroselerosis; brain disorder; depression; cardiovascular disease; atheroselerosis; brain disorder; respiratory disease; liver disorder; Fanconi's syndrome; spleen disorder; type II diabetes mellitus; skeletal muscle disorder; immunosuppressive; hypersplenism; renal disease; hypoglycaemia; gastrointestinal disease; nootropic; cirrhosis; Hodgkin's disease; neuroleptic; antiinflammatory;
                                                                                           This invention relates to the cDNA and protein sequences of novel secreted and transmembrane polypeptides PRO polypeptides. The invention also comprises a method for producing the proteins of the invention by recombinant means and antibodies specific for the protein of the invention. The antibody may be used for detecting the PRO proteins of the invention and may be used to modify their activity. To isolate the full-length PRO cDNA or to isolate other cDNA its construct hybridisation probes for mapping the gene which encodes that PRO and for genetic analysis of individuals with genetic disorders, in assays to identify other proteins or molecules involved in binding in assays.
                                                                                                                                                                                                                                                                                                                                  reaction, to generate transgenic animals or knock-out animals which in turn are useful in the development and screening of therapeutically useful reagents, for chromosome identification, and tissue typing. The PRO polypeptides are useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. The sequences may also be used to detect overexpression on PRO polypeptides in cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PILIPYRYQKEKUVSIEDYYELLYRVFIINNSLEKEQKVYEGAHRAVEIEALTPHSSYCVV

The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing their conformation are useful as vaccines for inducing their sequences of the invention are useful for treating cancers, infections, autoimmune disorders, haematopoietic conformation, congenital muscular dystrophy, junctional epidermolysis bullosa, Parkinson's disease, Huntington's chorestyl ester storage disease, inflammation, congenital infections, Alzheimer's disease, asthma, arthritis, allergies, schizophrenia, spay14324760a-associated disorders, rejection, capticaemia, psorlaais, inflammatory bowel disease, transplant rejection, sprid inforders, brain injury, AlDS, bone diseases, atthma, arthritis, spatin disorders including parasupranuclear palsy, myotonic dystrophy, depression, anxiety disorders and sleep disorders, cardiovascular diseases including oparasupranuclear palsy, myotonic dystrophy, ceptaenses including chronic obstructive pulmonary disease including chronic obstructisy remained chronic renal failure, sponders including hypercholesterolaemia, hypertriglyceridaemia, cirrhosis, viral and non-viral hepatitis, type II diabetes mellitus, renal disease including acute and chronic renal failure, glomerulone, cystinuria, skeletal muscle disorders including hypersplenism, capturing and tropical sprue, spleen disorders including hypersplenism, conformer, disease and malignant lymphoma, testicular cancer, male infertility. The present sequence is human ortoner in human ortoner is human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human ortoner in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel secreted and membrane-associated polypeptides and polynucleotides useful for preventing, ameliorating or correcting dysfunction or disease including diabetes, cancer, hypertension and growth
haemostatic, vulnerary, anticonvulsant, antirheumatic, neuroprotective nephrotropic, hypotensive, vasotropic, cytostatic, cerebroprotective, allergy, cytokine receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                       Martensen SA;

The polypeptide is useful in modulating the immune system by binding Zcytor16 ligand and thus preventing the binding of the ligand with endogenous

```
Zcytor16 receptor. It is useful for studying human inflammation or immune
                     function, or for treating autoimmune or inflammatory diseases such as inflammatory bowel disease, ulcerative colitis, Crohn's disease, arthritis, psoriasis, endotoxaemia, septicaemia, toxic shock syndrome or infectious disease, asthma, cancer, diabetes, renal dysfunctions or pancreatitis or in assessing therapeutic aspects of IL-TIF, chemical therapeutics, anti-IL-TIF antibodise, anti-Zcytoris antibodises or Zcytoris soluble receptors. The nucleic acid molecule and the antibody are useful as probes in detecting gene expression and gene structure, such as in the diagnosis and/or prevention of spontaneous abortions or in monitoring placental health and function. The invention is useful in gene is located on chromosome 6q23-q24.
